1.1 Add HTML links to URLs in text

The *auto_link()* function automatically adds HTML links to URLs that appear in text.

For example, given the following text:

```
text = "This is a link to https://indieweb.org"
```

This library would return:

```
'This is a link to <a class="auto-link" href="https://indieweb.org">https://indieweb.org
↪</a>'
```
